Explanation of the Referral To Treatment waiting time at point of treatment or other clinical decision stopping the clock and the waiting time at the point of first Outpatient appointment

The waiting time is calculated by ordering the activity records by weeks waiting in ascending order, locating the point of the 90th percentile patient and taking the weeks wait. In essence the weeks wait is representative of what 9 out of 10 patients will wait.

The waiting times are as reported to Welsh Government.

The patients sampled are only those who live within Cardiff and Vale UHB catchment.

The outpatient attendance includes those patients who did not attend their appointment to reflect what the waiting time would have been.
